

3 Steps to Adding 2 More Patients Per Day in Hygiene

ZYRIS

Step 1:

Schedule a Training with Zyris for Your Hygiene Team Before Using the Isolite® System

"After my first training with Zyris, I was able to incorporate Isolite System much easier. For example, I had to change my grip on my Ultrasonic to reach the distal of a third molar. There was a lot of small nuances that I would have been frustrated about if Zyris wasn't able to plant that seed in my head. From there on out, I was able to say to myself, 'Okay, I just have to readjust.'"

- Michelle Strange, RDH

Step 2:

Enable Your Team to Create a Quadrant by Quadrant Vs. Tooth by Tooth Workflow

"I had to really learn how to complete one side at a time and this changed my rhythm. In the past, I would use my airflow across the entire mouth and then I'd pick up an Ultrasonic."

- Michelle Strange, RDH

Step 3:

Make Sure Your Entire Team Can Confidently Speak to Patients About What an Isolite® System Is

"Once I figured out my rhythm with an Isolite System, the next step was to educate and inform my entire team. In 2020, patient conversations shifted. Now, we have to prep the patient on new technology that keeps everyone protected. It's important that we're all on board as a team. When that happens, your appointments will flow much better."

- Michelle Strange, RDH
