

Maximize your Time in the Operating Room

ZYRIS®

Operating Room Posterior
Mouthpiece Adapter

Zyris Isolite - Operating Room Posterior Mouthpiece Adapter

The Operating Room Posterior Mouthpiece Adapter allows the use of the Isolite Posterior Mouthpiece in an Operating Room setting.

The single-use adapter enables quick operating turns by allowing everything from the vacuum canister to the mouthpiece to be disposed of.

Improved Procedure Efficiency

Faster and streamlined procedures can reduce time patients spend under sedation and enhance overall efficiency.

Better Access and Visibility

Better access and visibility to the treatment area.

Reduced Risk of Aspiration

The built-in suction systems minimize the risk of aspiration by continuously removing saliva, blood, and debris, which is critical in ensuring patient safety during sedation.

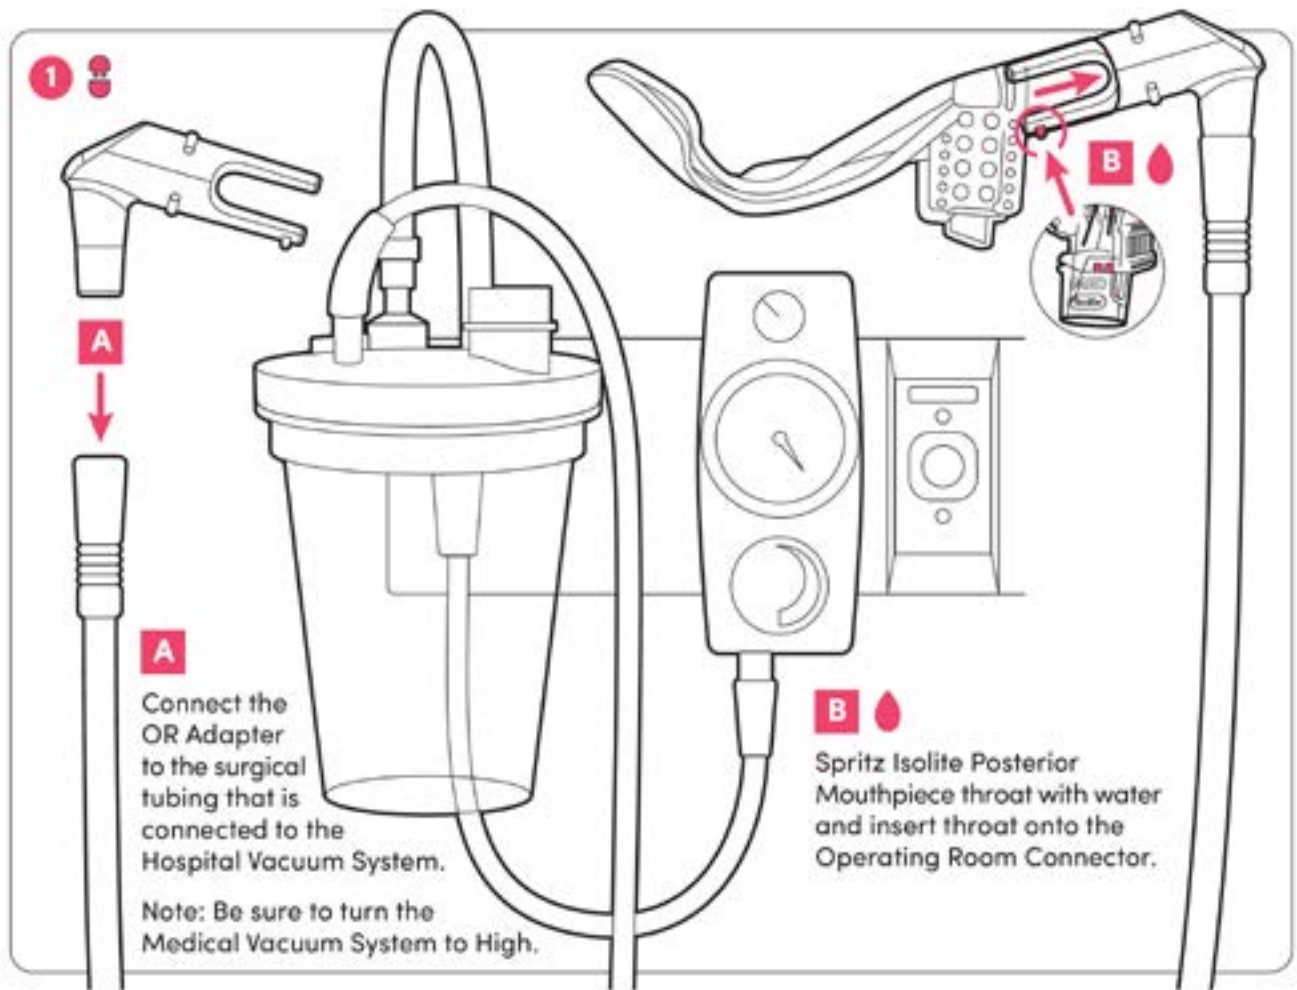

Efficient Moisture Control

Excellent suction and moisture control, keeping the work area dry and improving visibility.

Posterior
Mouthpiece Medium

“ I would not practice in the operating room without it. It makes practicing sedation dentistry faster, easier, and safer. It suctions all the fluids, I don't need to use a rubber dam, and I can go work on an entire side at a time. - Dr. Ana Vázquez ”

Specifications:

- Twenty (20) individually packaged, single-use Isolite Operating Room Posterior Mouthpiece Adapters
- One (1) dispenser box with IFU instructions

The Single-use Isolite Operating Room Posterior Mouthpiece Adapter attaches to standard surgical tubing which is attached to a vacuum canister attached to the Operating Room/Hospital suction system. The adapter channels suction through an Isolite Posterior Mouthpiece.
